

CMS APPLICATION — RELEASE SUMMARY REPORT

Release Version v1.2.3 — Features & Architectural Updates

Target Branch: deploy | Previous Live: v1.2.2 | Date: August 17, 2026

1. Sub-Category Management System

Implemented full Sub-Category architecture linked directly to Complaint Categories. Created sub_categories table, Eloquent relationships across Models, dedicated Admin CRUD interface (/admin/sub-category) with AJAX deletion and modal popup, and dynamic category-dependent loading endpoint.

2. Category-Dependent Employee Filtering in Complaint Forms

In complaint registration and edit forms, the Assign Employee dropdown dynamically filters technicians according to the selected Category and location scope. The dropdown stays locked with 'Select Category First' until a category is chosen, preventing cross-category technician misassignments.

3. Dashboard Sub-Category Filtering & Scope-Aware Stat Popup

Added multi-select Sub Category checkbox dropdown to the Dashboard filter toolbar. Configured DashboardController to filter all KPI cards, breakdown charts, and trends. Updated ComplaintController to ensure clicking any KPI card opens the popup modal displaying strictly matching complaints.

4. Complaints Management Sub-Category Filtering

Integrated a dedicated Sub Category filter dropdown on the main Complaints Management page (/admin/complaints), allowing instant AJAX-driven filtering and one-click filter reset.

5. Complaint Slip & Details Views Integration

Updated printable complaint slip (/admin/complaints/{id}/print-slip) to display Sub Category under Client Info and Priority badge under Request Details. Integrated Sub Category and formatted Priority badges across Admin Show view, modal popups, and the Frontend portal.

6. Excel Export Features (Complaints, Employees & Houses)

Enhanced Dashboard complaints Excel/CSV export to include Sub Category immediately after Category. Added direct one-click Export Excel buttons to both Employees Management (/admin/employees) and Houses Management (/admin/houses) for fast data downloading.
