

Navy Complaint Management CMS

Complete System Enhancement & Release Audit Report (v1.0.0 → v1.2.2)

System:	Navy Complaint Management Portal	Target Branch:	deploy
Repository:	https://github.com/nexertech/CMS.git	Release Tags:	v1.0.0 → v1.2.2
Lead Developer:	Amjad & Dev Team	Deployment Lead:	Siddique / Deployment Team
Status:	All Updates Implemented & Verified	Report Date:	August 17, 2026

Executive Summary

This master document provides a consolidated audit of all core feature additions, system enhancements, UI/UX overhauls, database schema migrations, and bug fixes across the entire lifecycle of the **Navy Complaint Management System (CMS)** application. It covers both foundational release milestones (v1.0.0 to v1.2.2) and specialized module updates.

■ ■ Release v1.0.0 / v1.1.1 — Base CMS Foundation Platform

Release Tag:	v1.0.0 / v1.1.1	Release Date:	Initial Base System Launch
Type:	Base Platform Infrastructure	DB Change:	Initial Schema Setup

Base Platform Core Features:

- **Laravel CMS Infrastructure:** Complete complaint tracking ecosystem customized for Navy housing sectors.
- **Location Hierarchy:** Structural mapping of GE Groups (Cities) and GE Nodes (Sectors).
- **Role-Based Access Control (RBAC):** Roles for Admins, Staff, CME Officers, and GE Sector-restricted users.
- **Complaint Lifecycle Management:** Ticket registration, Status updates (New, In Progress, Completed, Feedback), and PDF printable complaint slips.

■ ■ Core System Enhancements & Specialized Feature Additions

Workflow & Analytical Updates:

- **New 'Door Lock' Status Implementation:** Integrated a dedicated Door Lock status into the complaint lifecycle, complete with dashboard counter updates, analytical report filtering, and status badge styling.
- **Deprecation of Legacy 'GE ISLD' Status:** Completely deprecated the legacy `pertains_to_ge_const_isld` status across all database checks, status selection validation lists, dashboard counters, and role-based performance metrics.
- **Multi-Selection Scoping & Dashboard Filters:** Enhanced Admin Panel and Frontend dashboards to support data retrieval for multiple selections simultaneously across CMEs, GE Groups (Cities), or GE Nodes (Sectors).

Print Slip & User Interface Enhancements:

- **Automated Print Slip Trigger:** Configured an automated print dialog pop-up (`window.print()`) immediately following complaint registration to streamline immediate receipt printing.

- **Optimized Print Slip Design:** Restructured the print slip layout for physical media: added resolved operator identity under Registered By, widened technician work-remarks box, simplified feedback checklist scale, and removed internal priority flags from client receipt.
- **Sidebar Restructuring & Dynamic Submenus:** Organized navigation layout by nesting Roles under Users, and GE Nodes/Groups under CMEs in dynamic submenus to reduce vertical clutter.
- **Database & Frontend Typo Correction:** Fixed database and frontend typo by updating all instances of barak_damages to barrac_damages (Barrack Damages).
- **Registration Forms Validation & UX Upgrades:** Added sleek validation panels on user setup forms (checking username, password match, phone length, and scopes) and designed a quick recovery toggle button when selecting 'Other' type in complaint creation.
- **Alphabetical Sorting (A to Z):** Enforced alphabetical sorting across all Complaint Title tables, drop-down selects, and category listings for faster lookups.

■ Release v1.2.0 — Workflow Optimization, Audit Trail & Compact UI

Release Tag:	v1.2.0	Release Date:	August 1, 2026
Type:	Major Workflow & UI Feature Release	DB Change:	Manual SQL (complaints.status column default)

Key Updates & Enhancements:

1. **Multi-Category Batch Registration (+ Add Complaint Feature):** Introduced dynamic row additions on intake form (/admin/complaints/create), allowing operators to log multiple complaints for a property in one submission.
2. **Streamlined Priority Schema (Reduced to 2 Tiers):** Optimized priority categorization from 4 tiers down to strictly 2 levels (**Normal** and **Emergency**) across all forms, filters, and reports.
3. **Status Audit & Accountability Tracking:** Enhanced detail views and print slips to display the exact identity of staff responsible for creating/modifying complaints (Registered By and Status Changed By).
4. **Optional Technician/Employee Assignment:** Made employee assignment optional during initial intake logging to avoid operational bottlenecks.
5. **Compact Layout Redesign:** Overhauled Complaints, Approvals, Employees, and Spares detail pages into single-line flex rows (info-item), reducing vertical scrolling by 60%.
6. **Complaints Excel Export Engine:** Added robust client-side Excel/CSV export from dashboard featuring 17 complaint fields in project hierarchy order, left-aligned text-formatted phone numbers (preserving leading zeros), and total summary count rows.

■ Release v1.2.1 — Production Autoloader & Bulk Import Engine

Release Tag:	v1.2.1	Release Date:	August 7, 2026
Type:	Production Maintenance Patch	DB Change:	None

Key Fixes & Enhancements:

1. **Pre-Optimized Vendor Autoloader (ShuchkinSimpleXLSX):** Pre-compiled vendor dependencies with composer install --no-dev --optimize-autoloader and mapped classmaps directly in autoload_classmap.php.
2. **Bulk Excel Data Import Engine (Houses & Employees):** Resolved HTTP 500 error during Excel (.xlsx / .csv) bulk imports on production without requiring server-side Composer execution.

■ Release v1.2.2 — Performance & Multi-Sector Architecture

Release Tag:	v1.2.2	Release Date:	August 13, 2026
Type:	Major Performance & Multi-Sector Update	DB Change:	Manual SQL (B-Tree Indexes & sector_ids JSON)

Key Updates & Enhancements:

1. **Searchable AJAX House Dropdown (/admin/houses/search):** Replaced rendering 13,500+ static <option> elements with server-side Select2 AJAX lookup, accelerating load times to < 50ms.
2. **Multi-Sector Employee Assignment (sector_ids JSON Column):** Enabled assigning employees to multiple GE Nodes (Sectors) simultaneously using sector_ids JSON array storage while preserving sector_id for primary sector compatibility.
3. **Interactive GE Nodes Checkbox UI & Smart Auto-Select:** Introduced a multi-select checkbox dropdown in Employee Create & Edit forms with automatic selection when a GE Group contains only 1 GE Node.
4. **Multi-Sector Location Scoping (LocationFilterTrait):** Updated permission scoping so multi-sector employees are **100% visible** to users belonging to any assigned sector.
5. **Complaint Export Enhancement:** Added Description column as final column in CSV/Excel exports.
6. **Single-Line Employee Table Formatting:** Enforced text-nowrap single-line formatting across employee table cells and modal views.

High-Performance Database Indexing (130,000+ Records):

- Applied B-Tree indexes across houses, complaints, employees, spares, complaint_logs, login_history, and registered_devices tables for instant query execution.
- Switched CSV/Excel import validation to explicit extension checks (csv, txt, xls, xlsx) with ext-fileinfo dependency declaration.
